Sustainable
Actions

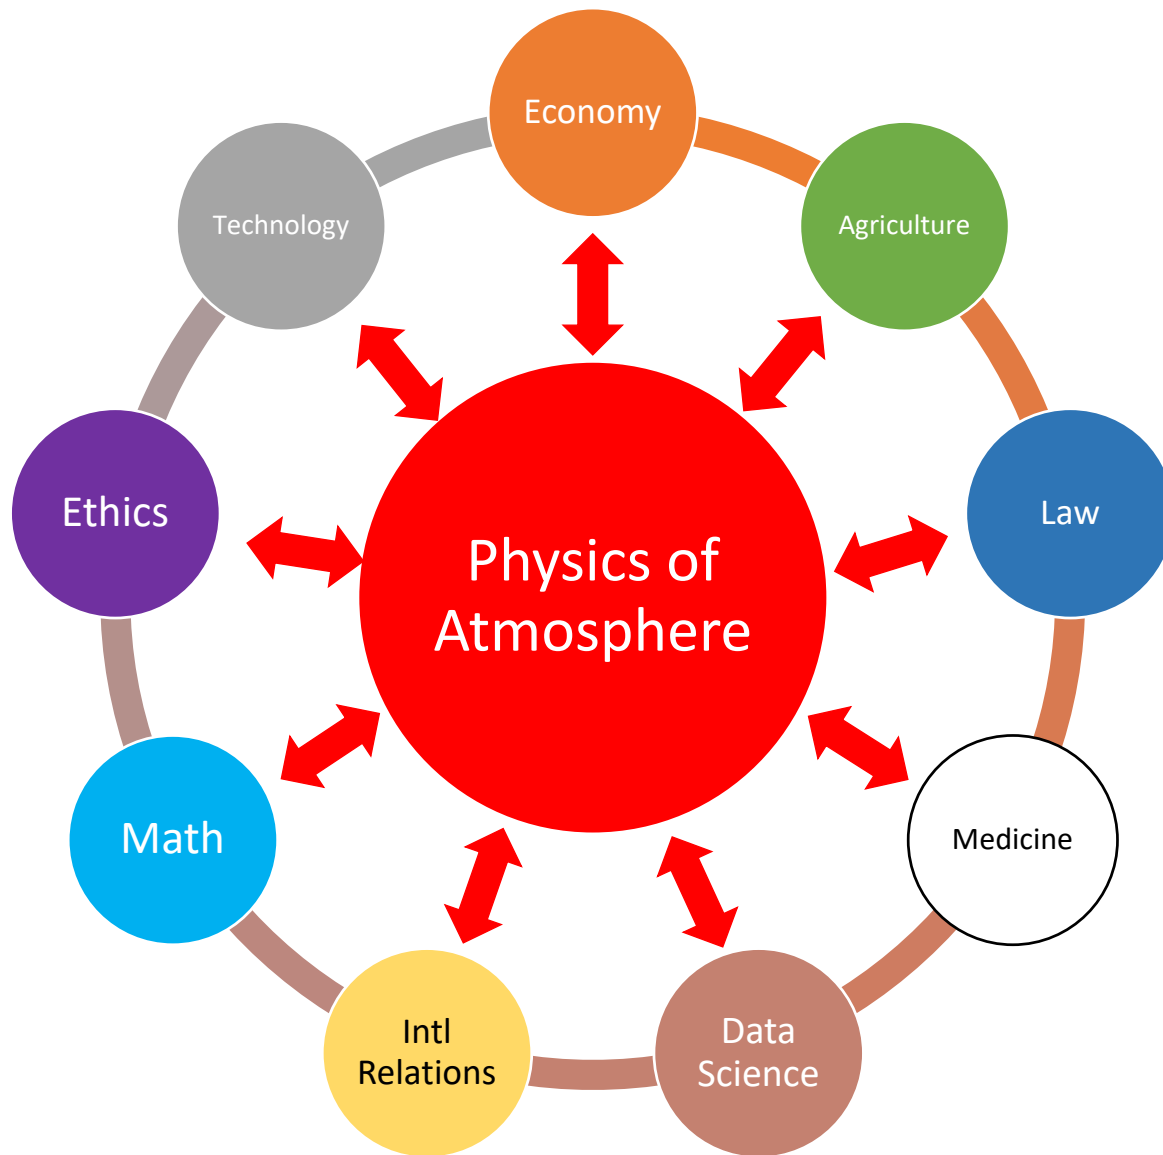

Weather and climate

- Math Physics and Chemistry
- Land, Ocean and Atmosphere
- Cryosphere and glaciers

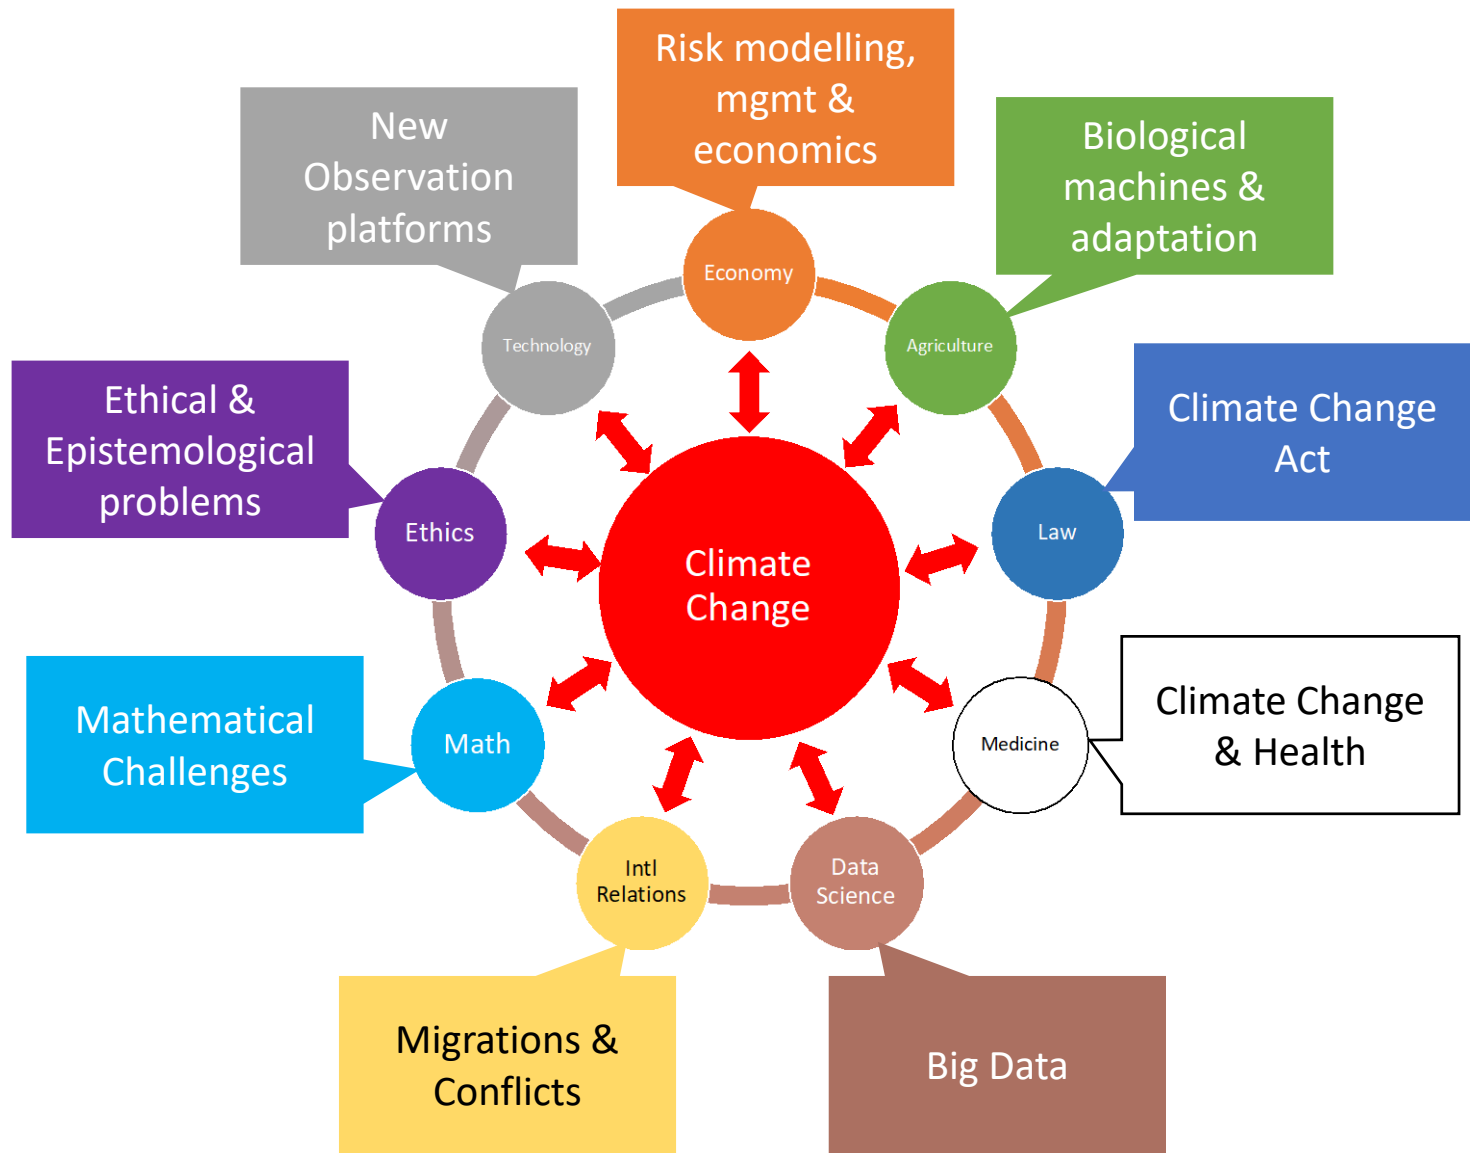

Human activities

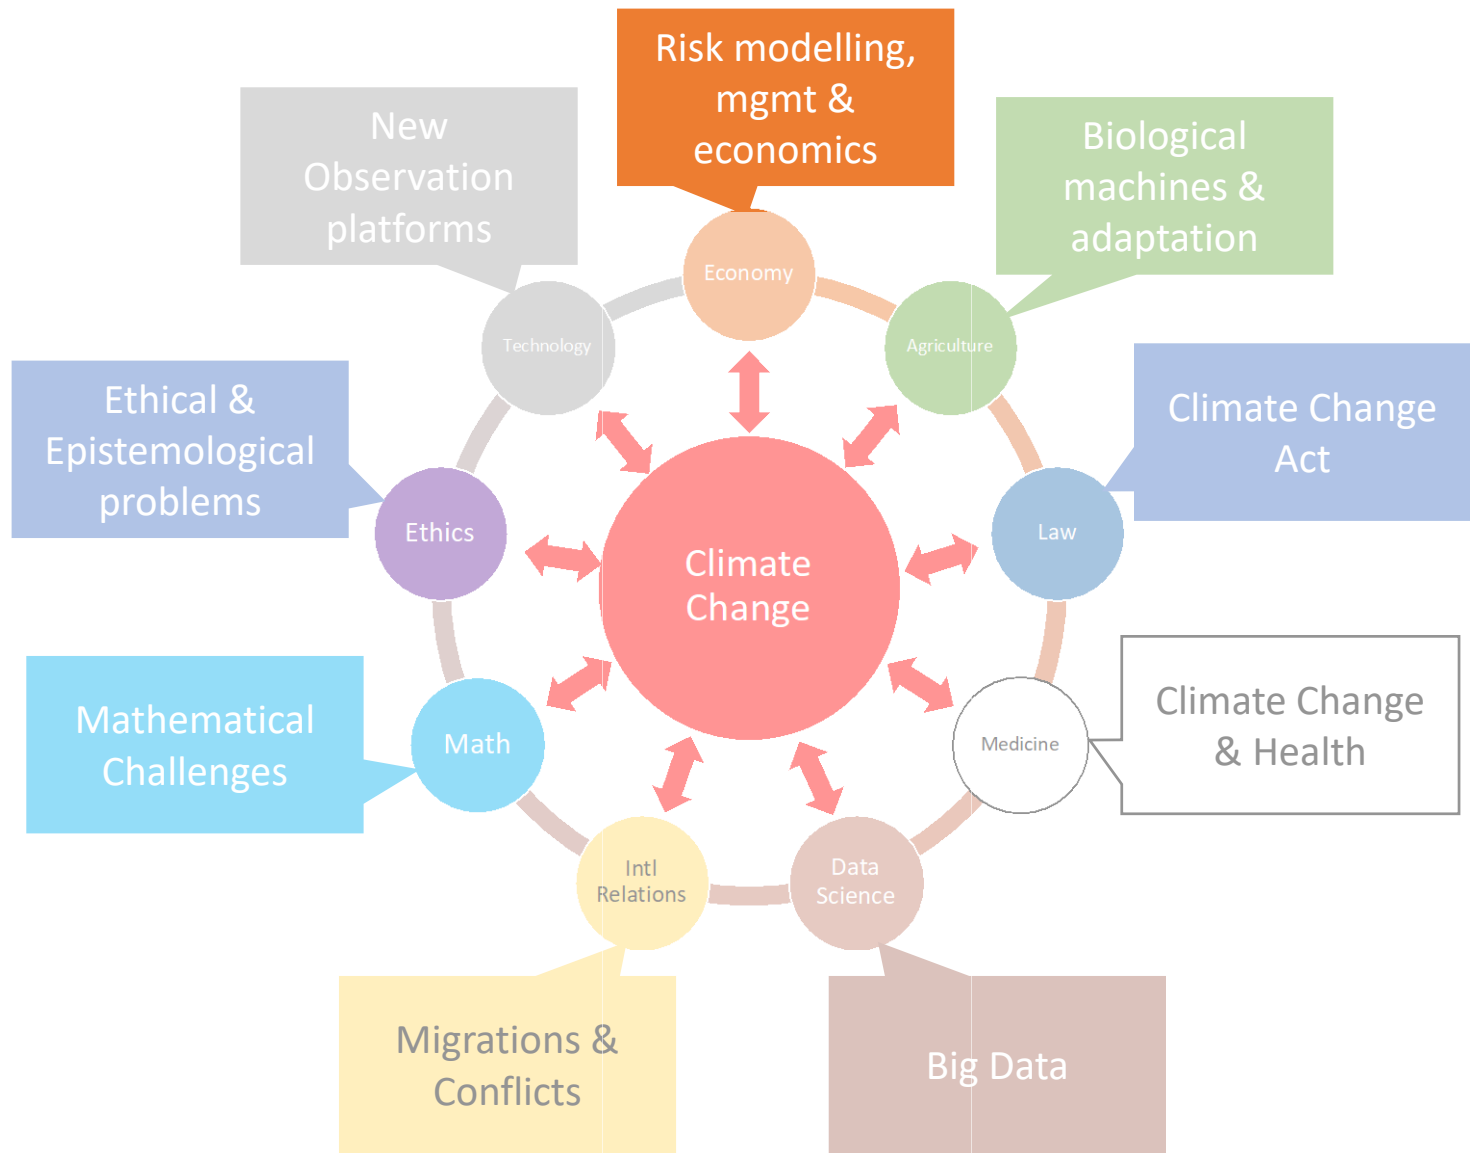

- Law and human rights
- Migration and conflict
- Energy and Agriculture
- Economics and Finance
- Health care and Policy making
- Risk and decision making

Average temperature anomaly, Global

Global average land-sea temperature anomaly relative to the 1961-1990 average temperature in degrees celsius (°C). The red line represents the median average temperature change, and grey lines represent the upper and lower 95% confidence intervals.

Global reported natural disasters by type

The annual reported number of natural disasters, categorised by type. This includes both weather and non-weather related disasters.

Global Nat-Cat (Weather-related) Insurance ROL

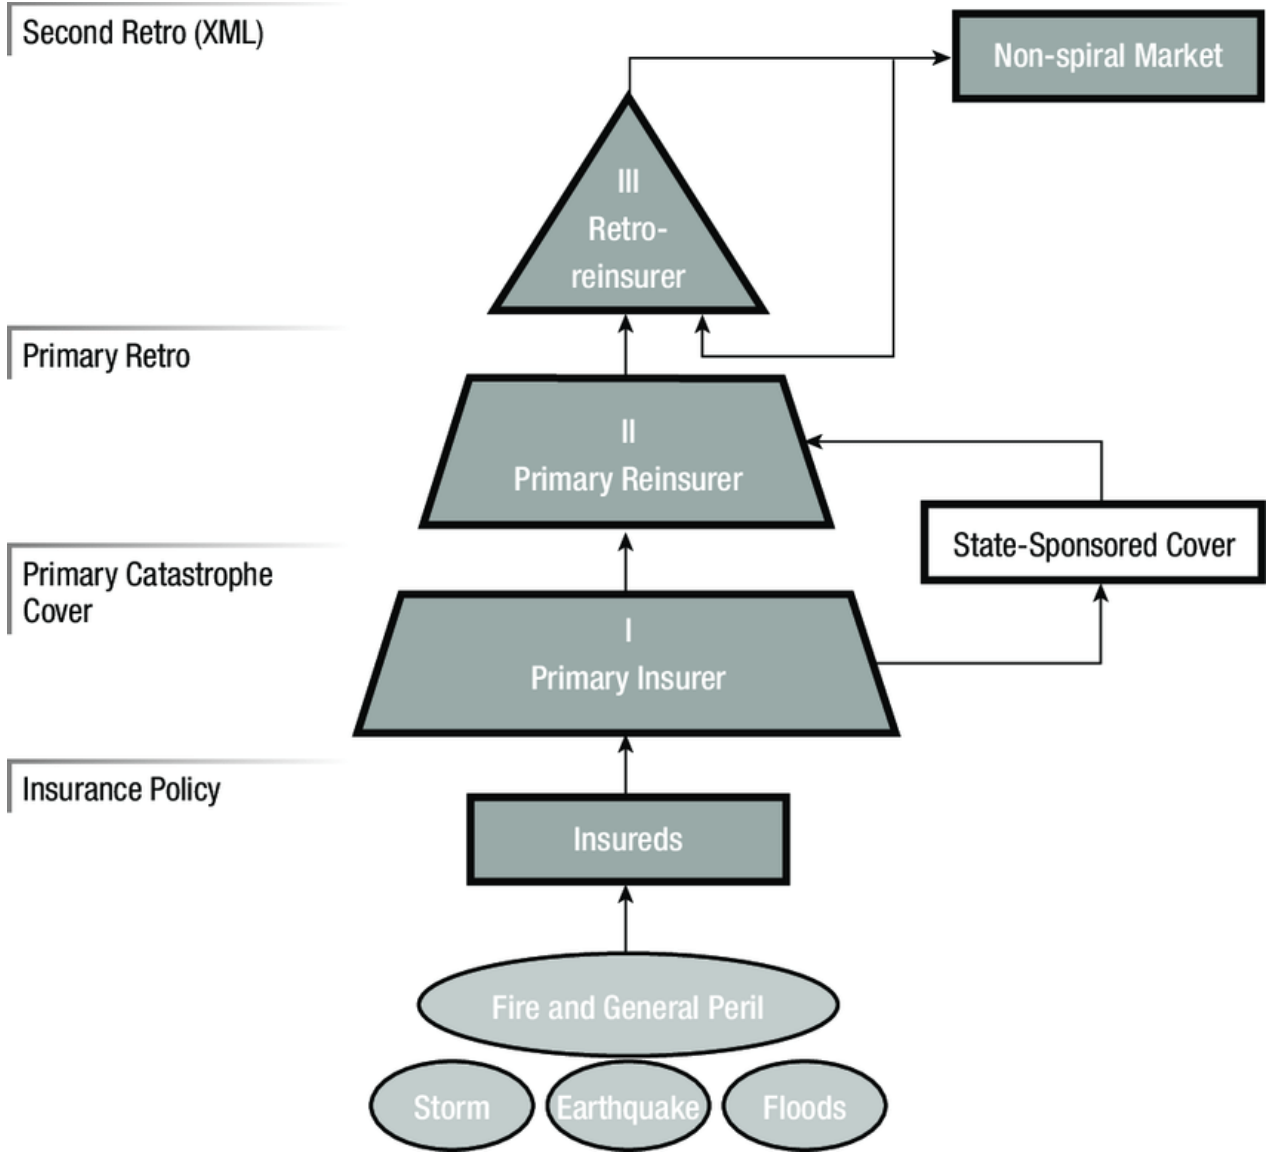

US Nat-Cat (Weather-related) Insurance ROL

ILW Pricing

PWC, 2019

Capital Market

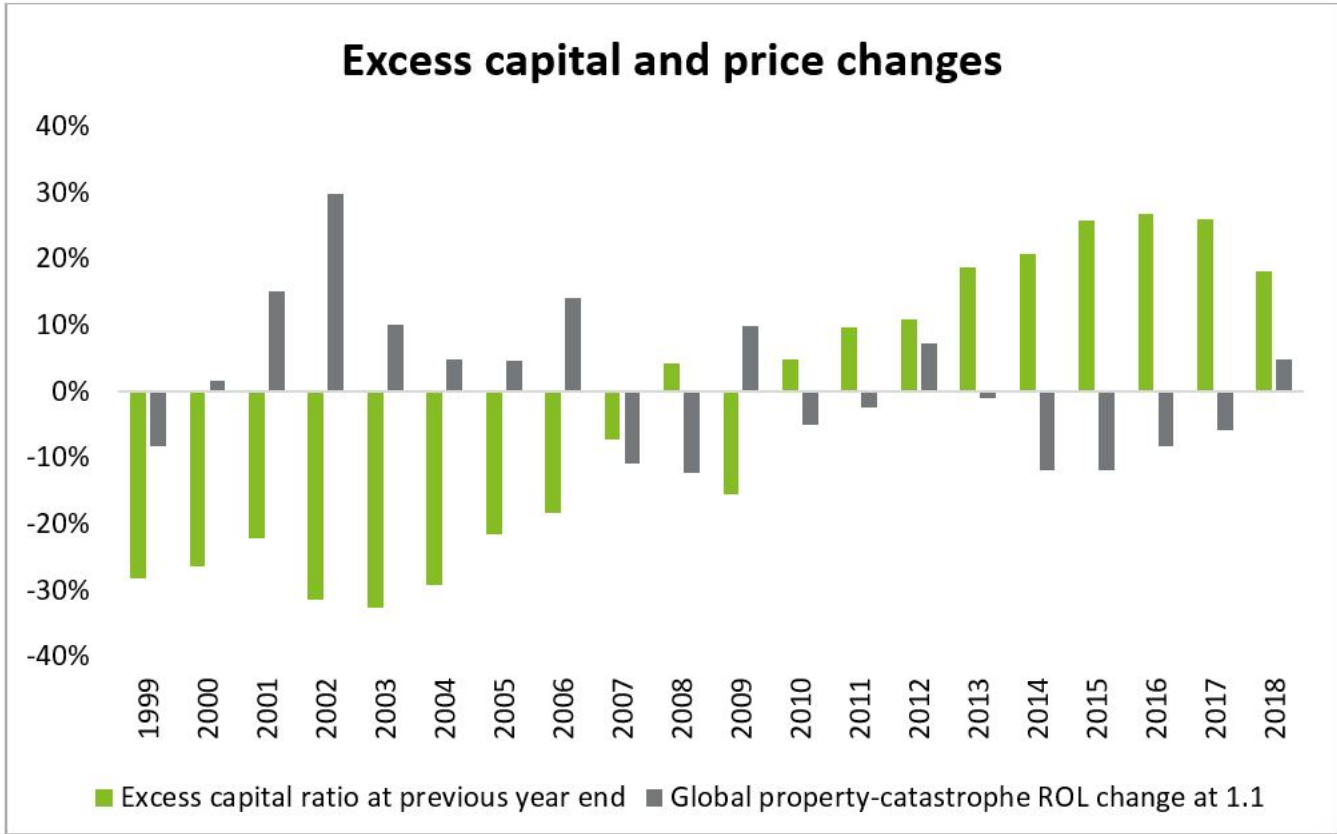

Re - Insurance

Primary Insurance

Deloitte, 2019

Premium & Excesses Rise
Policy terms tighten
Lower indemnity limits

Insurers make profits
Capital flows into the market
Insurers desire larger market share
Competition amongst insurers increases

Hard
Market
Soft

Insurers suffer loss
Capital exits the market
Supply contracts

Premiums & excesses fall
Policy terms widen
Higher indemnity limits

Nat Cat Capitals – Weather-related

What can we do?

- Improve the models (risk, weather, climate, ...) – increase reliability
- New Financial – Insurance Programmes
 - Disaster Risk Financing and Insurance (DRFI) Program
 - Parametric Insurance / Index Insurance
- Increase the Financial Resilience

Models for risk assessment and management

Climate and Weather related hazards

- Floods
- Drought
- Extreme Rainfall
- Wind storms
- Storm surge
- Heat/Cold waves

 Hazard: estimation of the frequency of the events

 Vulnerability: loss/damage models

 Exposure: identification of the assets and estimation of the exposure values

Disaster Risk Assessment

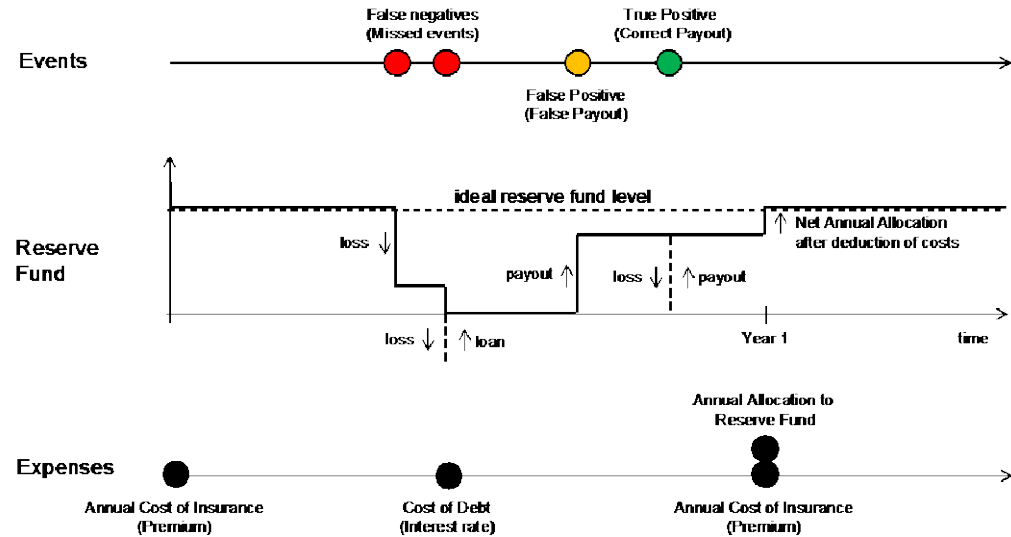

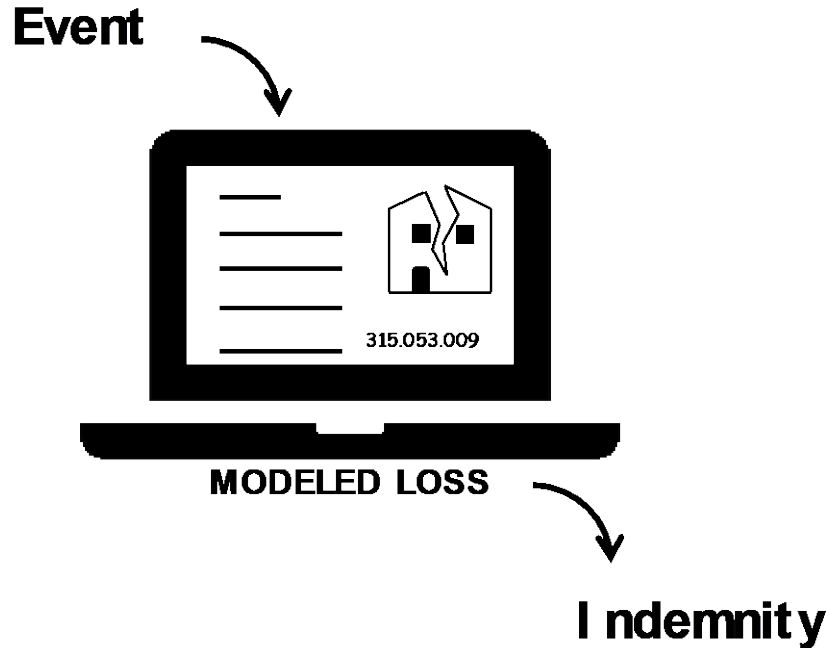

Disaster Risk Management/ Financing

Premiums

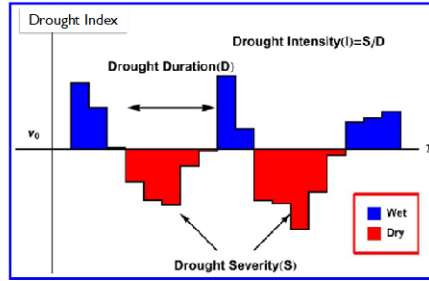

Payouts

Disaster risk financing: parametric insurance

Extreme Weather Event identification in near-realtime

Climate model

Climate index

Risk/Loss model

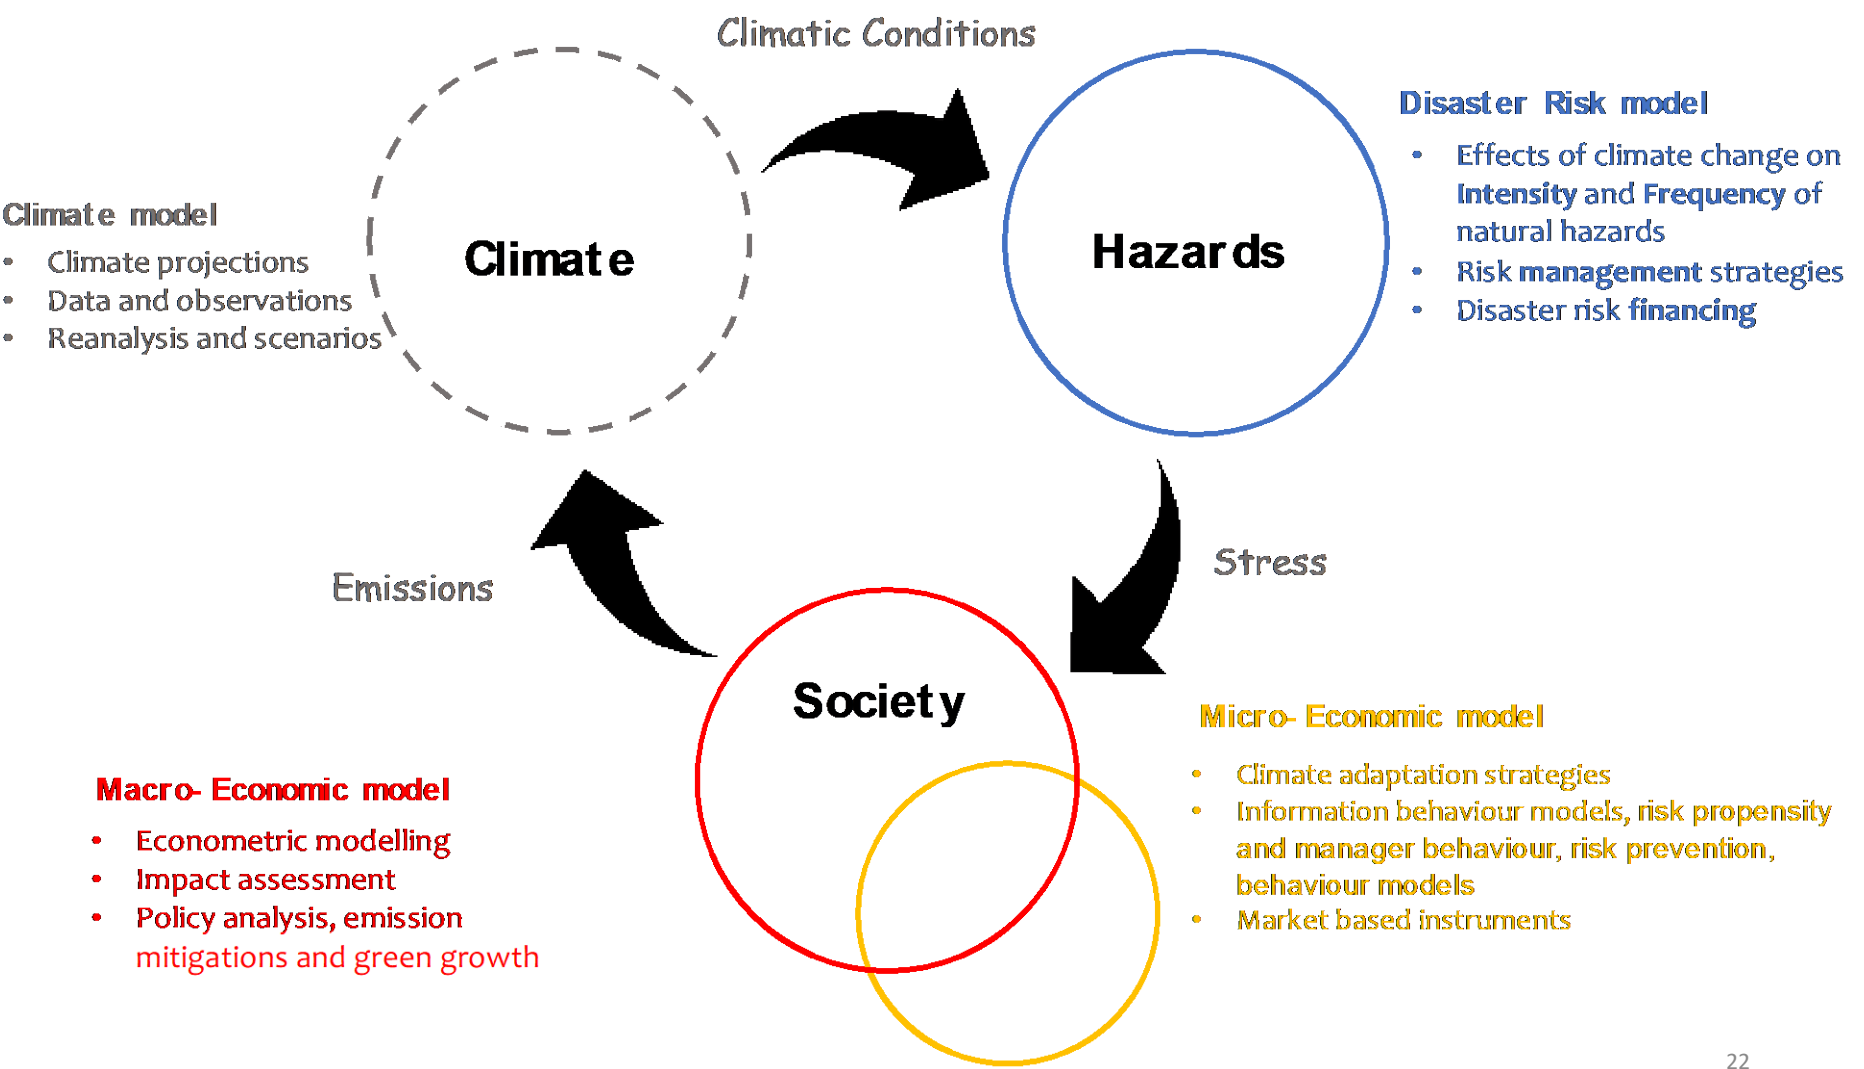

Loss index

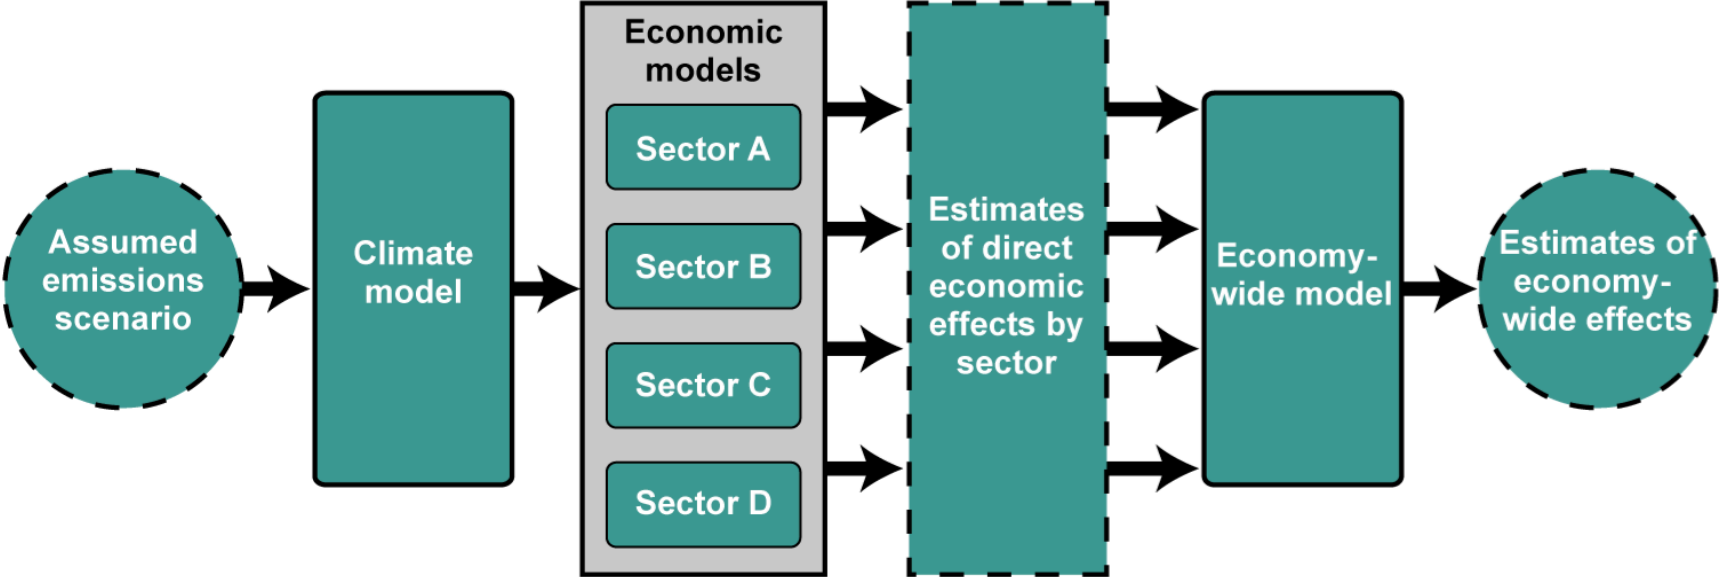

... what else?

- Combine Climate – Risk – Economic models

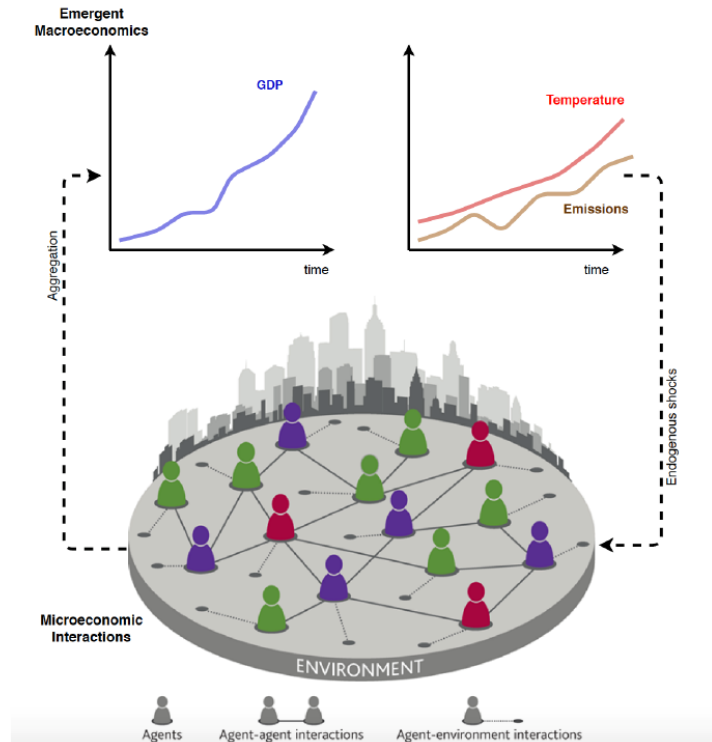

Coupled Climate → Economic models

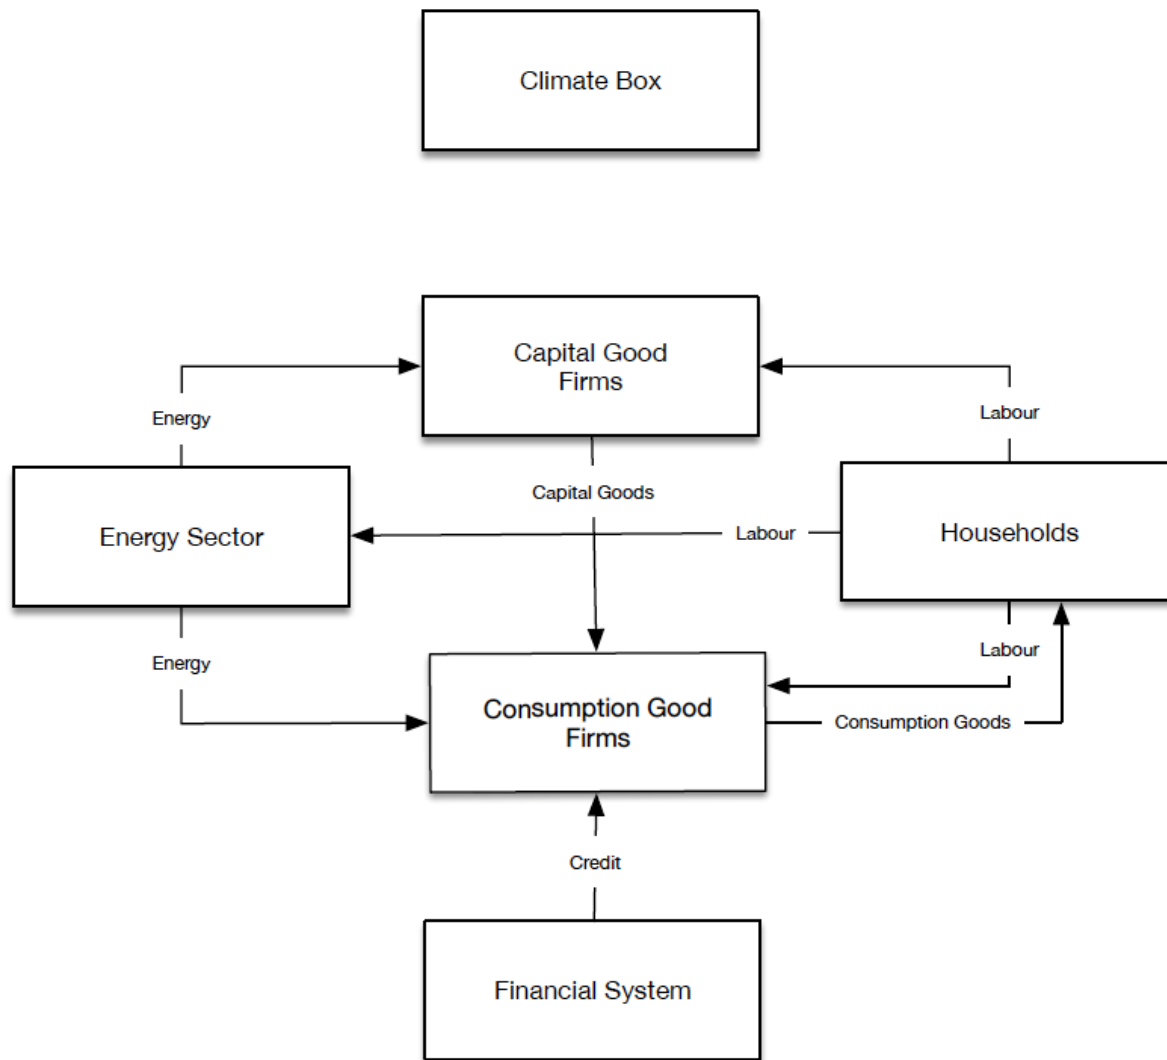

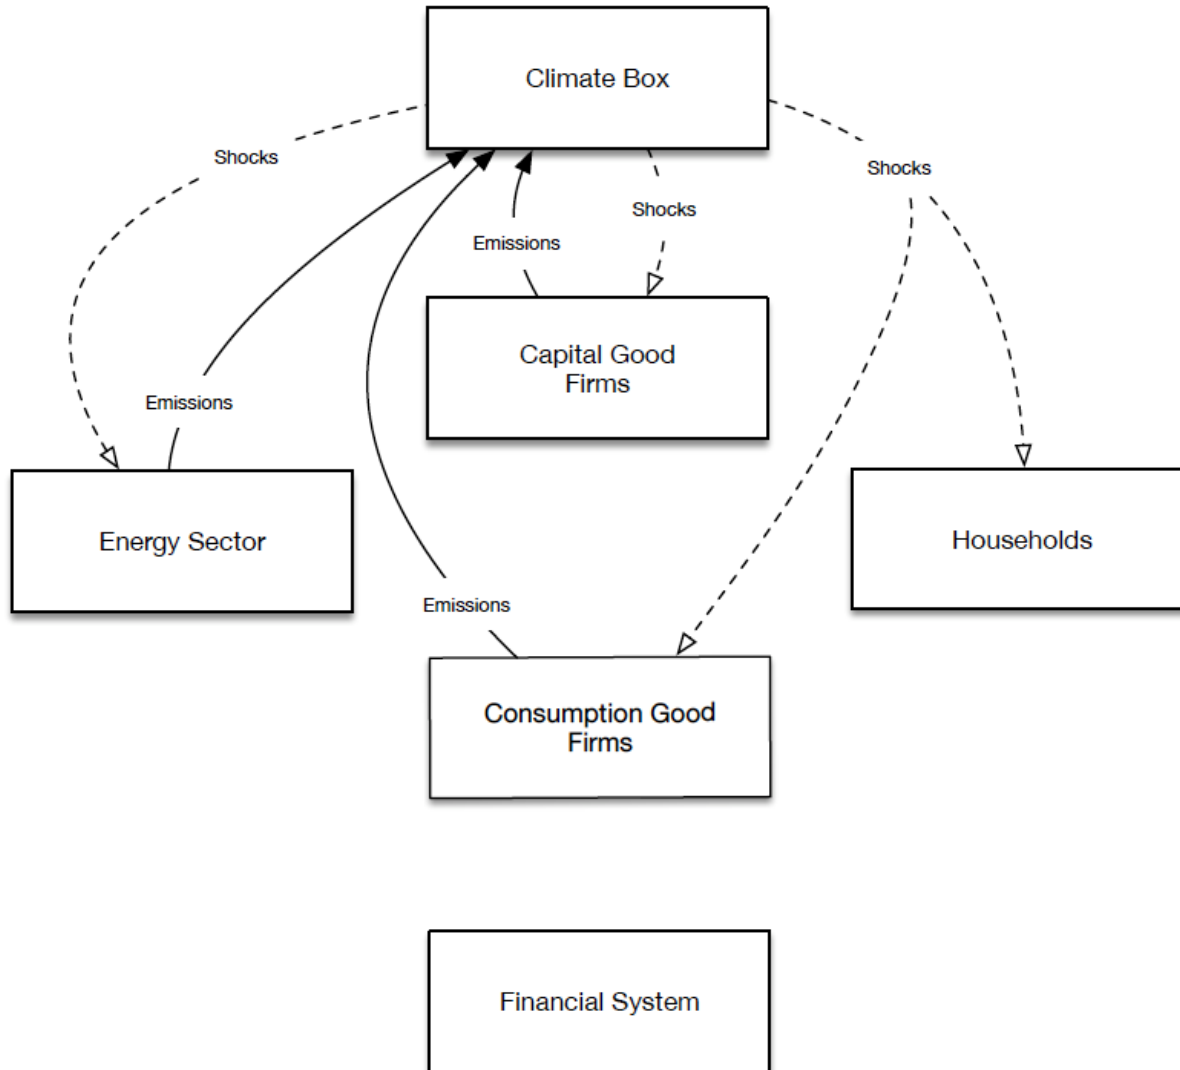

Source: GAO analysis. | GAO-17-720

New Economic models

DSK - The Dystopian Schumpeter meeting Keynes model

The «scale» issue

- Level 1: Global

Macro-Economic Model

Climatic Model

- Level 2: Region

- Level 3: Country

- Level 4: Local

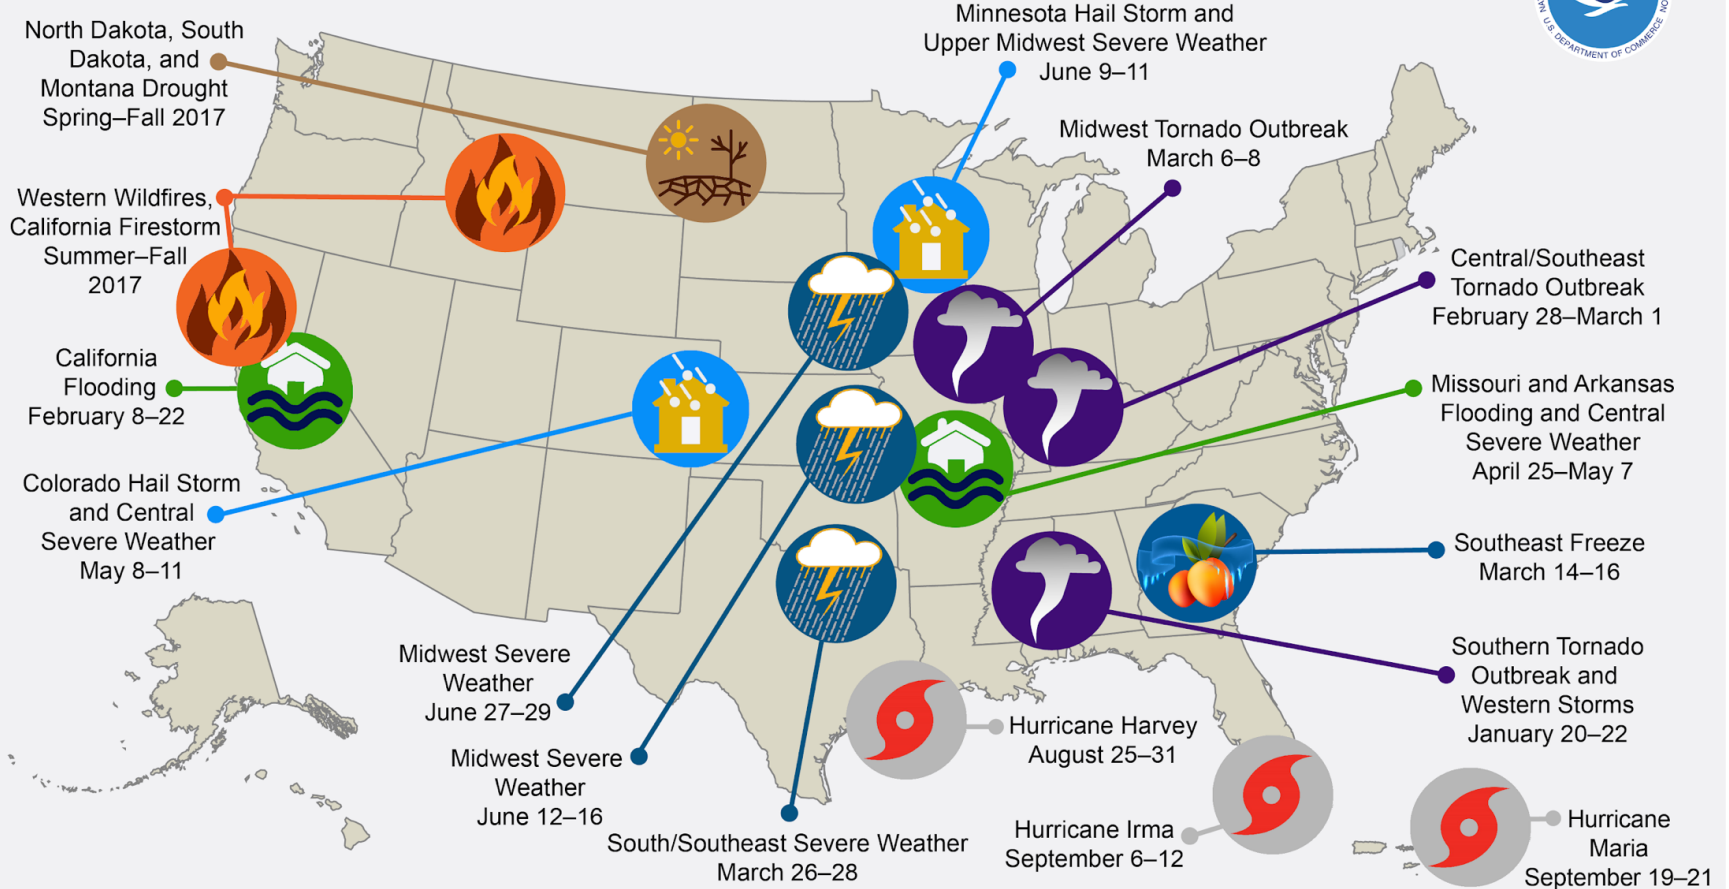

Micro-Economic Model

Risk Model

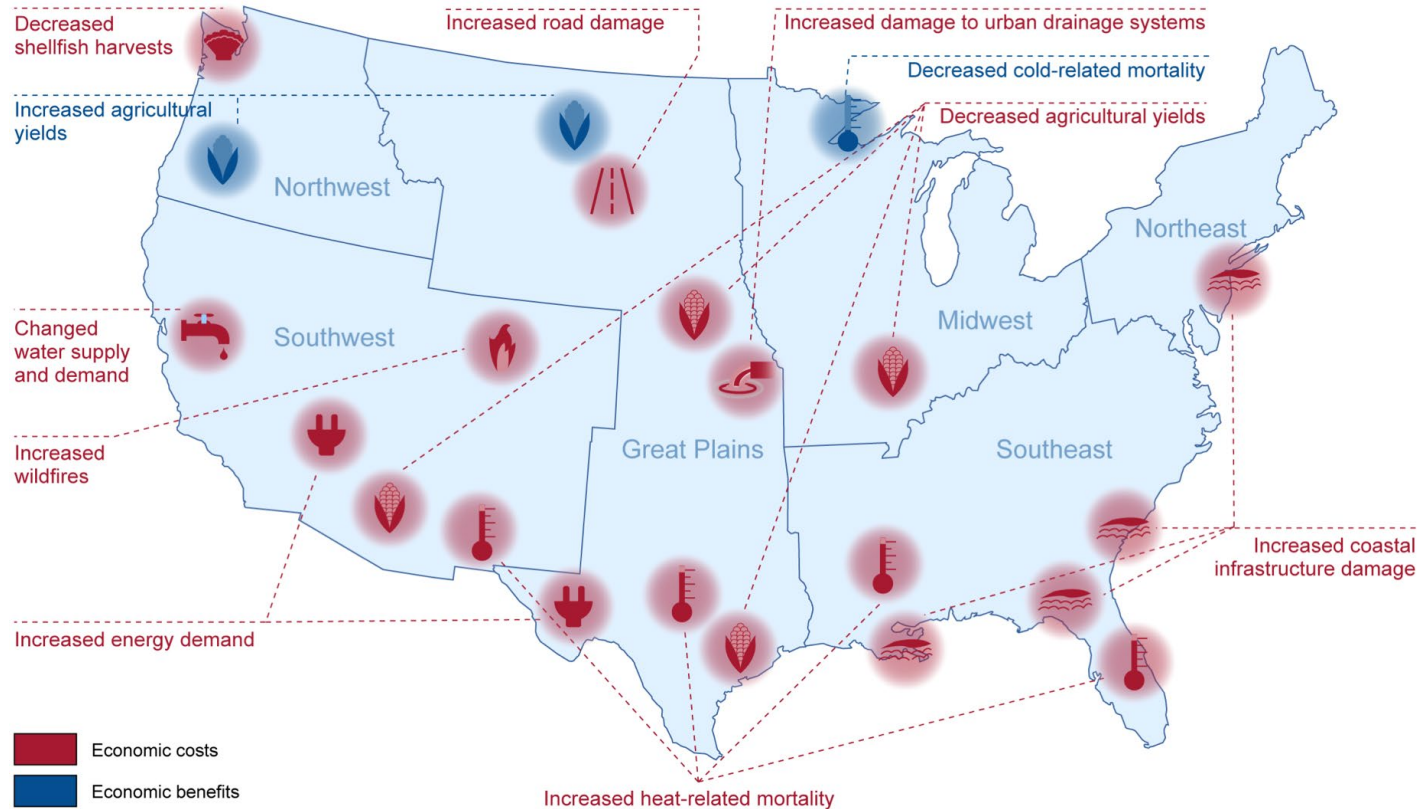

U.S. 2017 Billion-Dollar Weather and Climate Disasters

This map denotes the approximate location for each of the 16 billion-dollar weather and climate disasters that impacted the United States during 2017.

Example of CC impacts on the Real Economy

Sources: GAO analysis of Environmental Protection Agency, *Climate Change Impacts in the United States: Benefits of Global Action* (Washington, D.C.: 2015), and Solomon Hsiang et al., "Estimating Economic Damage from Climate Change in the United States," *Science*, vol. 356 (2017); Map Resources (map). | GAO-17-720

CLIMATE CHANGE:

Information on Potential Economic Effects Could Help Guide Federal Efforts to Reduce Fiscal Exposure

GAO-17-720: Published: Sep 28, 2017. Publicly Released: Oct 24, 2017.

Conclusions

- Improve models is not enough, we must combine them
- Need for inter-disciplinary and multi-disciplinary approaches
- Focus on Impacts

Thanks
